

What is Coronavirus?

COVID-19 is a respiratory illness caused by a Coronavirus first detected in Wuhan, China that has spread across 33 countries, including the United States.

WHAT ARE THE SYMPTOMS?

Early symptoms can be similar to the flu, including fever, cough and shortness of breath and may appear as few as two days and in as long as 14 days after exposure.

However, not everyone with fever and a cough needs to be tested for COVID-19. Healthcare providers will determine if you should be tested based on the severity of your symptoms.

HOW DOES IT SPREAD?

COVID-19 is spread through:

- Direct contact with an infected person
- Droplets (sneezing or coughing) from an infected person
- Contact with items and belongings of an infected person

For more information, visit www.cdc.gov/coronavirus.

HOW CAN I AVOID CATCHING IT AND PREVENT SPREADING IT?

While there is no vaccine to prevent COVID-19, the best ways we can prevent illness are:

- Frequent hand washing with soap and water
- Not touching your eyes, nose and mouth
- Staying home when sick

Wearing a face mask will not decrease your chance of getting COVID-19 and should only be worn by those with symptoms or by healthcare workers.
